The Project **“Creation of Green Belt in Mining Affected Districts”** was approved in the 16th Board of Directors (BoD) Meeting held on 27th Dec 2019. The project aims to mitigate the negative impact of mining on environment by enhancing green cover through massive plantation. The key features of the project are:

1. Raising of 6 months old seedlings
2. Raising of 18 months old seedlings

The purpose of raising of 6 months old seedlings is for the plantation by the community in the forest land as well as in the individually community land, institutions etc. These seedlings are distributed free of cost to the beneficiaries and planted with support of VSS and monitoring by local forest staffs. In addition to this, there's an incentivisation component in the program based on survival of plants in each year upto 3 years. Similarly, indigenous forest species of 18 months old seedlings are raised for plantation by the department under various schemes.

Some of the indigenous species raised are Neem, Amla, Karanj, Patuli, Sunari, Bamboo, Sal, Harida, Bahuda, Tentuli, Pijuli, Arjun, Pahadi, Palash etc.

The project is being implemented in the following 12 forest divisions in Odisha:
